DETAILED ACTION

Election/Restrictions

1. Applicant's affirmation of the election with traverse of Group I, claims 1-20 in the reply filed on 04/12/2007 is acknowledged. The traversal is on the ground(s) that there is an "absence of a serious burden on the Examiner in prosecuting the claims of Groups I-IV. These claims are related and connected by the claimed aqueous dispersion and include processes for preparing and methods of applying the aqueous dispersion."

This is not found persuasive since the search for the elected dispersion does not require the particulars or search of the non-elected process of making, and processes of using.

Applicant further traverses on the groups that "the present claims embody a single, general inventive concept and hence meet the requirement under PCT Rule 13.1 for unity of invention."

Again, this is not found persuasive since the requirements for unity of invention are not just that the applicant have a single inventive concept. Applicant is simply mistaken with regard to their understanding of the requirements of a "special technical feature" for unity of invention. The special inventive concept must provide a contribution to that art. In other words, the inventive concept itself must be novel or non-obvious.

The requirement is still deemed proper and is therefore made FINAL.

Application/Control Number: 10/510,993 Page 3

Art Unit: 1713

2. This application contains claims 21-23 drawn to inventions nonelected with traverse. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1, 3-7 and 9-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Kambe et al., for reasons cited in the previous action.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 2 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, 35 U.S.C. 103(a) as being unpatentable over Kambe et al., for reasons cited in the previous action.

Response to Arguments

7. Applicant's arguments filed 04/16/2007 have been fully considered but they are not persuasive.

8. Applicant argues that the inorganic particle of Kambe et al. is only taught as part of the composite, is only surface modified as part of the composite and that it is not taught to be surface functionalized by itself with a crosslinking agent. Applicant is directed to col. 6, lines 26-35, where Kambe et al. teach that while the linker compounds may be initially bonded to the polymer, the desired embodiment has them first used to functionalized the inorganic particle to form functionalized inorganic particles, prior to combining the functionalized inorganic particle with the polymers.

Also, the linker compounds are crosslinking agents. Applicant is reminded that the present claims do not require the crosslinking agents to be independent of either the polymer or the inorganic particle. Even so, Kambe et al. includes embodiments wherein the linkers are added during the combination of the functionalized inorganic particle with the polymer particles.

9. Regarding the 102/103 rejection of claim 2, applicant's arguments are based the presumption that claim 1 is novel over Kambe et al. As demonstrated above, this is not the case. Kambe et al. does teach all the feature of the independent claim 1, as currently written.

Application/Control Number: 10/510,993

Art Unit: 1713

- 10. In response to applicant's argument that Kambe et al. doesn't teach using the dispersion to preparing a coating film, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.
- 11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Kelechi C. Egwim whose telephone number is (571) 272-1099. The examiner can normally be reached on M-T (7:30-6:00).

Application/Control Number: 10/510,993 Page 6

Art Unit: 1713

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
